

Rapido with Evo laptop slat wall mount

Rapido Workstations

- Sit stand desks with screens - Electric or hand wind adjustable

The new Rapido workstation combines an adjustable height worksurface with fixed height screen panels. While allowing the individual to work in maximum comfort throughout the day, Rapido also preserves the overall design of screened work areas by maintaining constant screen heights. Users can work at whatever height is comfortable, including standing if preferred, without adversely effecting the overall aesthetic layout of the office. Desktop lengths vary from 1200-2200mm, widths 600-1000mm.

Rapido is available in three main configurations:

- Stand-alone desk
- Linked 3-way workstations
- Linked 4-way workstations

Other configurations can be built to order.

Rapido desks are available in four different models. Desk surfaces can be height adjusted by hand crank, electric motor, or by technician adjustment where daily height adjustment is not required. A fixed desk is also available.

Rapido screens use aluminium frames and junctions that are minimalist and non-obtrusive. A slat rail or function rail option allows a variety of accessories to be fitted including light weight shelves or LCD monitor arms.

Rapido frames are finished in white or silver with a variety of screen fabrics. Screens are available in various heights and are shown here in Ecostyle Frost from Sustainable Living Fabrics®.
