

This adjustable bracket has been specially developed to maximise ease of access and ergonomic flexibility for the popular range of Dell WYSE thin client computers. The bracket allows the thin client to be conveniently placed behind the monitor, so it may be moved in tandem with the monitor and easily accessed from the desktop, whilst being concealed behind the monitor and out of the way.

Removing the thin client from the desktop provides a much smaller equipment footprint, frees up desk space, and simplifies IT access.

- Attaches “sandwich style” between the monitor and the monitor arm.
- Adjustable casing allows devices to be held securely, facilitates ease of access, and caters for different sized devices.
- Pre-configured for easy attachment - suits 75 and 100mm VESA screw mount pattern.
- Perforations on the bracket match the Dell device perfectly to allow for airflow.
- Generous port-holes provide easy cable access.
- For use with 7Flex or other Uplifting monitor arms.

NOTE: Images show thin client bracket and 7Flex monitor arm.
